

KMI Health & Safety Alert

There was a near miss on KMI Watling St Rd Preston on 22.12.11. A Q Plant 50T crawler crane was in the process of emptying a tip skip using the auxiliary block when the hook and chains fell to the ground just missing the slinger/signaller. Upon inspection it was found that the 2 grub screws that stop the hook from unscrewing from the block were missing. A full investigation is underway.

KMI will share all relevant information once the investigation is complete.

Management Action

1. Site managers should ensure this information is forwarded to all relevant staff and subcontractors.
2. Site management to ensure **ALL** equipment of this type is checked as soon as possible!
3. Site management to brief out the contents of this alert as a TBT/Daily briefing and populate site safety notice boards with this alert.
