

## Safety News

### New B&V AMP5 Induction is rolled out

B&V have introduced a new AMP5 health and safety and environmental induction for everyone working on B&V AMP5 sites. The purpose of the induction is to ensure that all persons working on our sites receive a consistent message on our commitment to health, safety and environmental management and the standards and behaviours we require from everyone.

The Induction includes the following elements:

- B&V leadership commitment to health, safety and environmental management
- Key messages from Thames Water
- Health and safety and environmental expectations and standards
- BOSS
- B&V Golden Rules
- Drugs & Alcohol policy implementation
- Incident and near miss reporting
- Environmental standards.

The induction also includes a safety quiz which tests people's understanding of the key messages delivered.

The induction is delivered centrally - the programme for rollout started with a pilot early February with full implementation planned for May/June 2011. This induction is an improvement to our current induction process and ensures a consistent message is delivered to all.

**For the new induction presentation visit our 'Induction' section of the One Safety HUB.**
