

Lost time / specified injuries

A summary of all workplace incidents that have resulted in staff of Thames Water and its partners incurring a specified injury and/or needing time off work.

Latest lost time injury

2017/18 LTI 020	9 th November 2017	Queen Mary Reservoir	Wholesale Water - Production Sites – AMP 6 Contractors – J Brown
<p>What happened? While manually unloading rubble from a flat back vehicle and transferring it into a skip, a colleague was injured. As he threw one lump of rubble into the skip the rubble released from his left hand and snagged the glove of his right hand, this pulled his arm down striking the side lip of the skip. This has resulted in the suspected fracture to their right forearm.</p> <p>Immediate actions to make the area safe: All work on site stopped, site cleaned and secured.</p> <p>Safety message: Loading and handling of all loads should be planned to minimise repeated handling using mechanical aids wherever possible. When manually loading waste into a skip always place the load and do not throw items.</p> <p>Responsible Manager : David West</p>

Previous lost time injuries 2016/17

2017/18 LTI 019	7 th November 2017	Rye Meads STW	Wholesale Waste – Wastewater Treatment – Bio Recycling – AMP 6 Waste Contractors – BP McKeefry
What happened?			
The IP was about to unload inter-site sludge at Rye Meads STW. On arrival at site he noticed that there was some sludge in the pipe but he thought that he could lift it onto the vehicle. As he lifted the pipe from the reception tank onto the vehicle he felt a twinge in his back.			
Immediate actions to make the area safe:			
It was the IP's last job of the day. The following day he carried out three loading operations in the morning, before the pain became too much. He visited his doctor the next day and was advised to take pain relief and rest.			
Safety message:			
Reminder sent to all drivers to assess the weight of the pipes before attempting to undertake any lifts			
Responsible Manager:			
Paul Stocker			

2017/18 LTI 018	10 th October 2017	King George VI Reservoir, London	Wholesale Water – Water Production – London North West
-----------------	-------------------------------	----------------------------------	--

What happened?

The IP was removing redundant signage from around one of our reservoirs. The sign fell and struck the ladder he was using, causing him to fall to the ground. He sustained cuts, bruises and an injury to his knee.

Immediate actions to make the area safe:

Sign recovered and area made safe.

Safety message:

It is essential that all tasks are properly planned before any work commences. It is also essential that an assessment of the work area is conducted; ensuring a SHE 5 is completed before work starts, every day, every job and every change.

Responsible Manager:

Zak Espi-Castillo

2017/18 LTI 017	2 nd October 2017	Shardeloes Road London	Wholesale Water - Infrastructure Alliance - Eastern South - KCD
-----------------	------------------------------	------------------------	---

What happened?

IP was assisting a manual lift of a section of 8" UPV pipe, when the pipe slip and the IP's hand came in contact with a piece of concrete causing a cut to the thumb.

Immediate actions to make the area safe:

Pipe move to safe area and site was left safe.

Safety message:

It is essential that an assessment of the work area is conducted; ensuring a SHE 5 is completed before work starts. It is also essential that on-going assessments are carried out related to the work in hand. The right equipment and PPE should be selected and fit for propose or task for the job in hand the need to use the proper techniques as per manual handling training is essential.

Responsible Manager:

Sarah Hurcomb

2017/18 LTI 016	28 th September 2017	Marlow Road Henley-on-Thames	Wholesale Waste – Customer Field Services – Z-Tech
-----------------	---------------------------------	------------------------------	--

What happened?

The IP was removing a pump from a wet well. The pump was suspended on a mobile lifting gantry and whilst performing the lift the IP placed his hand where it could become trapped or crushed.

The IP realising the seriousness of the injury and made arrangements to attend hospital.

Immediate actions to make the area safe:

The work activity ceased, the area was made safe and the IP taken to hospital.

Safety message:

When performing a manual handling task, please ensure a risk assessment is undertaken which takes into consideration the nature of the task and the environment within which the task is being performed.

Before even attempting any manual handling task, ensure that all appropriate training has been provided and when appropriate, employees attend refresher training.

It is also important to pause and re-evaluate the task and determine if there is a better and safer way of achieving the same aim, such as seeking assistance from a work colleague.

Responsible Manager:

Ashley Booke

2017/18 LTI 015 18th September 2017 Aldershot STW Wholesale Waste –
Wastewater Treatment –
Bio Recycling – BP McKeefry

What happened?

The IP was loading sludge at Aldershot STW. On arrival at site he noticed that there was some sludge in the pipe but he thought that he could still lift the pipe and connect it onto the vehicle. As he lifted the pipe from the collection tank onto the vehicle he felt a twinge in his back.

Immediate actions to make the area safe:

IP called the office to let them know what had happened and that he felt he could carry on with his normal duties, however during the course of the day the IP felt his back getting worse and visited his doctor the next day and was signed off sick with a back strain.

Safety message:

Reminder sent to all drivers to assess the weight of the pipes before attempting to undertake any lifts

Responsible Manager:

Paul Stocker

2017/18 LTI 014 4th September 2017 Maple Lodge STW eight2O - Wholesale Waste -
Infrastructure - CA

What happened?

The IP a slinger / signaller for a lifting operation, lifting & placing concrete troughs using an 18t excavator. When lifting a concrete trough into position adjacent to a laid trough, the slung load was swinging slightly. The IP placed his hand on the back of the trough to steady the load at the same moment the slung load struck the stationary trough, trapping his right index and middle finger between the two units. The IP suffered a laceration to his index and middle finger.

Immediate actions to make the area safe:

Work was stopped with immediate work area made safe. Excavator was parked up and all concrete trough lifting operations stopped pending a review of the working methodology.

Safety message:

Clear communication between all parties on site should be maintained at all times during lifting operations and that any potential pinch points are eliminated or mitigated.

Responsible Manager:

Maple Lodge Senior General Foreman

2017/18 LTI 013 17th August 2017 OFF SITE:Carriageway Wholesale Water -
Infrastructure Alliance -
Thames Valley

What happened?

The IP was operating a valve on a 4" main for a fire hydrant exchange and as IP tried to turn the key, he felt a sharp pain in his shoulder.

Immediate actions to make the area safe:

The valve cover was replaced and area was left in a safe condition.

Safety message:

Ensure a SHE5 assessment considers all risks from the work activity, including where two people may be

required to operate a valve. Always apply the correct manual handling techniques during all valve operations.

Responsible Manager:

Roger Culley – General Manager Thames Valley IA

2017/18 LTI 012

16th August 2017

Coppermills WTW

Wholesale Water - Water
Production - London
North East

What happened?

The injured person was working in a Slow Sand Filter outlet chamber servicing the gearbox of the outlet valve. After decoupling the drive shaft, a coupling came apart and the upper section of the shaft fell from height, making contact with the injured person's head. He sustained a cut to the head which required 8 stitches.

Immediate actions to make the area safe:

Work stopped pending investigation. The hatch over the chamber was replaced.

Safety message:

Ensure SHE5 considers all risks from the work activity. All couplings on shafts should be checked and confirmed secure before work starts.

Responsible Manager:

Katarzyna Gill, Performance Manager

2017/18 LTI 011

10th August 2017

Barnes Ring Main Shaft

Water – EMCOR

What happened?

The IP and a co-worker were cutting steels on site. Whilst marking the steel prior to cutting it, the steel slipped off the work bench and hit the ground before bouncing and striking the IP's foot. The IP was wearing a steel toe cap boot.

Immediate actions to make the area safe:

The activity which caused this incident was suspended and the method for installation is under review.

Safety message:

Ensure items are secure and not able to move, especially when using a workbench. Appropriate PPE's must be worn at all times, for instance footwear with metatarsal protection might be suitable where heavy objects could fall and land on feet.

Responsible Manager:

Molly Tucker, Area Operations Manager

2017/18 LTI 010

08th August 2017

Milton Ave, London
E6

Wholesale Water Metering
- MGJV

What happened?

Whilst hand digging an excavation with a grafter to install water meter the IP caught and damaged a suspected low voltage main cable. The IP has sustained arc eye which occurred from the flash over when striking the electric service flashed up in his eyes. IP was taken to Newham General hospital.

Immediate actions to make the area safe –

Gang immediately stopped work and contacted supervisor

Safety message –

Always ensure you have completed your permit to break ground and have undertaken all relevant safe digging procedures when excavating. Fortunately in this circumstance the IP was wearing his eye protection which

prevented the potential for further injury, this really stresses the importance of ensuring that you wear your full PPE when undertaking a work related task where this is required.

Remember to always take a zero compromise approach to you and your colleagues health, safety and wellbeing

Responsible Manager:

Dave Tann

2017/18 LTI 009	11 th July 2017	Stamford Road, Eastham	eight20 - Wholesale Water – Infrastructure - SMB Aquam
-----------------	----------------------------	---------------------------	--

What happened?

The IP was pulling a hose off the back of his wagon when the hose has dropped out of one hand landing on their left hand causing fracture.

Immediate actions to make the area safe:

The area was made safe and the IP attended hospital, where he was treated for his injuries.

Safety message:

Whilst we might believe that the actions we are doing are routine, and that we have done them many times before, we should always apply the same level of concentration as when we are doing some for the very first time.

Responsible Manager:

S Freegard

2017/18 LTI 008	11 th July 2017	Sundridge WTW	Wholesale Water - Production Sites – South East
-----------------	----------------------------	---------------	---

What happened?

While working in a gas store pipework failed resulting in a release of Chlorine that was inhaled by an individual.

Immediate actions to make the area safe:

Upon evacuation the individual activated the emergency shut down system and closed the doors to the store containing the released gas within the room.

The emergency services were summoned and two colleagues in breathing apparatus entered the store, confirmed that Chlorguard had operated closing all cylinder valves for all vessels on line and then proceeded to manually close all valves on the header line to fully isolate all pressure pipework.

Two portable gas detectors were placed on the floor either side of the bank of cylinders and readings were confirmed at zero ppm.

Safety message:

Pressurised gas systems must not be touched by persons working alone. Two persons must always be present at the most potentially hazardous moments, i.e. when cylinders or drums containing liquefied toxic gases are being connected or disconnected, or when a plant containing toxic gas is being maintained, dismantled or tested, and when responding to toxic gas leaks. Both must be wearing breathing apparatus.

Responsible Manager:

Scot Hubbard

2017/18 LTI 007	5 th June 2017	Balancing Pond - Wokingham	Wholesale Waste – Waste Network – Thames Valley
What happened?			
A network engineer attended site to clear silt from the outfall of the Balancing Pond. While undertaking this task he was laying down on his front using a spade to remove the silt. This caused him to strain his right shoulder. The engineer went to GP who administered an injection, and prescribed strong pain killers.			
Immediate actions to make the area safe:			
The silt has been removed safely; next scheduled work is December 2017.			
Safety message:			
Prior to starting any activity ensure a use of a SHE 5 assessment must be undertaken to ensure the area and activity is safe.			
Responsible Manager:			
Alex Saunders			

2017/18 LTI 006	1 st June 2017	Beddington STW	eight20 - Wholesale Waste - Infrastructure - CA
What happened?			
A gang were carrying out work within an excavation to install a new drainage system for the STP area. During this process, material fell from the trench wall and on to the IP's back / back of his boots/legs. The IP attend hospital for an assessment			
Immediate actions to make the area safe:			
Work within this location was stopped. Fencing was placed around the area, no access until further notice.			
Safety message:			
Always insure a full risk assessment is conducted of the activity being undertaken and the safe system of work is followed to mitigate any risk.			
Responsible Manager:			
John Carruthers			

2017/18 LTI 005	31 st May 2017	Bushy Road SW20	Wholesale Water-Infrastructure Alliance-Trunk Mains & Project Support
What happened?			
Technician was operating a network valve when the key split causing him to jar his back. IP attended work the next day but had to leave due to being in pain.			
Immediate actions to make the area safe:			
Area left in a safe condition.			
Safety message:			
Always check your equipment prior to commencing work to ensure it is fit for purpose for the task.			
Responsible Manager:			
Thierry Droulez			

2017/18 LTI 004	10 th May 2017	Off site OX16 4RT	Wholesale Water- Infrastructure Alliance-Thames Valley-RPS
What happened?			
The IP was completing a leakage detection activity and was required to lift a lid. During the process of lifting the cover to a meter box and he put his foot down doing so slipped on a pebble and twisted his groin			

Immediate actions to make the area safe:

The IP did not feel that the injury was causing him any significant pain and so carried on with the rest of his shift. He attended work the following day and but still felt pain and so made an appointment to visit his GP on his way home after his working day. His GP advised him to rest the following day.

Safety message:

Ensure you do a site risk assessment and check the surrounding area for any trip hazards or uneven surfaces. Assess how you will handle and move equipment before you start the activity.

Ensure you follow the principles of manual handling to enable you to use the right equipment to reduce any risk of harm or aggravating any pre-existing injuries.

Responsible Manager:

Roger Culley

Wholesale Waste – Wastewater
Treatment –North East

What happened?

The IP was walking from press hall, down a flight of grated stairs to take stream samples. At which point the IP tripped, he did not have 3 points of contact, and lost his footing, thereby sustaining a cut below knee cap and treated at the local hospital with 12 stitches.

Immediate actions to make the area safe:

Area was checked and there was no action required on site, the staircase was clean and area clear with no evidence of potential trip hazards.

Safety message:

Personnel must be aware of their environment and maintain 3 points of contact at all times.

Responsible Manager:

Chris Power

2017/18 LTI 002

28th April 2017

Newbury STW

Wholesale Waste – Wastewater
Treatment –Thames Valley

What happened?

The IP was assisting a tankering contractor to set up pipes to unblock a sludge line. The blockage was in a pump pit and the job involved manoeuvring the pipes over the hand railing into the pit to connect to the blocked pipe. As the IP handled the pipe he stepped back into an open fire hydrant pit, injuring his foot.

Immediate actions to make the area safe:

Temporary barriers were immediately put in place around the fire hydrant. The fire hydrant is to be removed and the cover replaced. The site was checked for similar covers

Safety message:

Always be aware of your surroundings, ensure that a risk assessment has been conducted prior to starting work and that controls are in place to mitigate any hazards.

Responsible Manager:

Amelia Thurlow

2017/18 LTI 001 10th April 2017 Greenhithe, Dartford Retail Contractor - MeterU

What happened?

The IP was undertaking meter readings and sales investigation activity in the area. Whilst in the process of reading a meter located on the footpath, a meter reader had his lower legs driven over by a third party vehicle that was leaving a private block of flats

Immediate actions to make the area safe:-

The IP went to hospital.
Police were called and are presently investigating the incident

Safety message:

Ensure area is safe to carry out the activity prior to commencing which should include a risk assessment of potential hazards.

Responsible Manager:

Barry Freeman

What Happened?

On the Ashendon Road site, under a full road closure, a Banksman received injuries to the left foot and ankle caused by a mini digger reversing on site and striking him. The Banksman was taken to Hospital and diagnosed with bruising to his left foot and ankle. He was released from hospital later that day.

Immediate actions to make the area safe:

All site operations have been suspended pending an investigation.

Safety message:

Implement a “Zero Tolerance” approach to breaches of people and plant interface controls.

What Happened?

The IP was lifting a hinged manhole cover to assess the location for performing a confined space entry. As the cover was eased from its frame and opened the IP expected the in-built locking mechanism to hold the cover in an open almost vertical orientation. However, the locking mechanism failed to engage causing the cover to fall onto the right foot of the IP. Even though he was wearing appropriate safety boots, the cover impacted the bridge of the foot causing severe pain and swelling.

Immediate actions to make the area safe:

The work activity proceeded as intended with the area was made safe.

Safety message:

Ensure that any covers and frames are initially inspected for obvious defects and inspect them for any missing or damaged safety features such as hinges and fall prevention grills. Follow good manual handling techniques and avoid positioning yourself in the ‘Line of Fire’. Never assume that a manhole cover is free from defects as they are often found in harsh environments whereby over time they are likely to become corroded. If you notice manhole covers and safety features are heavily corroded, raise the issue and ensure that nobody else accesses the manhole covers until they have been replaced.

What happened?

A repair and maintenance operative was loading his van with street work barriers to be able to undertake tasks on the water network. While manual handling a barrier from a pile on the floor he felt a pop in his lower back.

Immediate actions to make the area safe:

The storage area has been assessed for space and suitability for the amount of equipment kept at the location and to check access is sufficient for manual handling tasks to take place. The barriers have now been stored in the standing position, rather than in a pile on top of each other on the floor.

Safety message:

Assess whether manual handling tasks can be carried out safely and that you are able to apply the four principles of lifting – Break down any straight lines by changing your position to be able to open up your stance and to get the object inside your base. Use your big engines to lift the weight of the object; do not use your back. Turn your whole body when changing direction; do not twist. Use a dip and drive motion when moving an object to gain momentum.

What happened

A contractor, visiting a customer property to investigate a reported sewer blockage slipped on a grass bank, fell to the ground and injured his back.

Immediate actions to make the area safe:

The contractor was able to continue the job, using the nearby footpath.

Safety message:

Shortcuts lead to harm.

Whether it's taking shortcuts with safety or deciding to take the shorter but riskier route on site or on a customer's property the outcome can often be the same; Injury or ill health.

As we enter the winter month's slips, trips and falls become a very real and ever present hazard.

If we are vigilant and make the right decisions we can prevent this type of avoidable incident.
